## PHP

### PHP CodeSniffer

PHP CodeSniffer is a tool that can automatically detect violations of the standards you configure, and sometimes automatically fix them.

### Drush

Drush is a computer software shell-based application used to control, manipulate, and administer [Drupal](#) websites.

### APC

Alternative [PHP](#) Cache with a goal to provide a free, open, and robust framework for caching and optimizing PHP intermediate code.

### Bitrix Framework

A PHP-based platform for the development of web apps. Popular in the former Soviet Union region, two famous products are: Bitrix Site Manager & Bitrix24.

### Blackfire

Performance Management Solution for [PHP](#). It is a developer tool that will help test, debug and optimize application performance.

### CakePHP

A modern [PHP](#) 7 framework offering a flexible database access layer and a powerful scaffolding system that makes building both small and complex systems simpler and easier.

### CMS

Content Management System (CMS) is an application (more likely web-based), that provides capabilities for multiple users with different permission levels to manage content, data or information of a website project, or internet / intranet application.

### Codeception

[BDD](#)-styled [PHP](#) testing framework. Collects and shares best practices and solutions for testing PHP web applications. Based on three main pillars: [PHPUnit](#) as a testing environment, Mink, and Symfony Components.

### CodeIgniter

Powerful [PHP](#) framework with a very small footprint, built for full-featured web applications. Provides a simple toolkit to create fully featured web applications.

### Composer

A [PHP](#) dependency management tool, created to facilitate installation and update of project dependencies, it is used in all modern PHP frameworks ([Symfony](#), [Laravel](#)).

### Doctrine

A set of [PHP](#) libraries primarily focused on providing persistence services and related functionality. Its prize projects are an object-relational mapper ([ORM](#)) and the database abstraction layer it is built on top of.

### Drupal

Platform into which various modules can be plugged and combined to provide [CMS](#) customized to your needs. There are modules for many purposes, for example storing different kinds of content, retrieving content based on criteria, and for displaying content in different ways and much more.

### Gearman

Distributed task handling application framework. Provides a simple framework to handle jobs across many servers where jobs can be pushed onto the server and workers pull the jobs off the server and complete them.

### Guzzle

[HTTP](#) client library for [PHP](#). Simplifies sending HTTP requests and integration with web services.

### HHVM

Virtual machine for running [PHP](#) code as well as for running the new programming language [Hack](#). The power of HHVM comes from using just-in-time compilation. HHVM uses this approach to optimize "hot code" which it notices is being repeatedly run.

### Joomla

Ecommerce platform that is popular for medium to large businesses. The following list highlights some of the concrete features: out-of-the-box content management features, content organization using nested level of categories, content versioning and tagging, media management, user management, etc.

### Kohana

[PHP](#) 5 framework that uses the Hierarchical [Model View Controller](#) architectural pattern. It aims to be secure, lightweight, and easy to use.

### LAMP

Solution stack used to develop dynamic web sites and servers. Refers to [Linux](#), [Apache](#), [MySQL](#) and [PHP/Python/Perl](#) and is considered most growing field these days for development and deployment of highly dynamic web applications which are based on reliable foundation.

### Laravel

[PHP](#) web application framework based on [MVC](#) architecture. The security feature of Laravel is prompt in taking appropriate action as and when there is a breach in security. The syntax patterns of Laravel are expressive and elegant.

### Lumen

A [PHP](#) micro-framework designed for building stunningly fast [microservices](#) and [APIs](#).

### Magento

An open-source e-commerce platform written in PHP. Provides online merchants with a flexible shopping cart system, as well as control over the look, content and functionality of their online store.

MAMP

Application that can be installed on the Mac which allows to have access to a local [PHP](#) server and [MySQL](#) server. Essentially, MAMP gives all of the tools to run [WordPress](#) on your machine, for development and
