

## Ruby

Resque	A <a href="#">Redis</a> -backed library for creating background jobs, placing those jobs on multiple queues, and processing them later.
Active Record	A Ruby library for working with Relational SQL Databases, like <a href="#">MySQL</a> and <a href="#">Postgres</a> . It provides an <a href="#">Object Relational Mapping</a> .
Brakeman	A security scanner. Checks <a href="#">Ruby on Rails</a> applications for security vulnerabilities. Looks at the source code of an application.
Bundler	Ensures <a href="#">Ruby</a> applications run the same code on every machine. Tracks and installs the exact gems and versions that are needed.
Capistrano	Remote server automation and deployment tool written in <a href="#">Ruby</a> . Capistrano automates the process of making a new version of an application available on one or more web servers.
Capybara	Automation library that provides a means for controlling a browser. Simulates scenarios for user stories and automates web application testing for behavior-driven software development.
Crystal	A dynamic, functional language designed for building scalable and maintainable applications. Leverages the <a href="#">Erlang</a> VM, known for the running low-latency, distributed and fault-tolerant systems, while also being successfully used in web development and the embedded software domain.
ERB	Embedded Ruby. A templating language that enables to embed <a href="#">Ruby</a> code in an HTML document, similar to ASP, <a href="#">JSP</a> and <a href="#">PHP</a> and other server-side scripting languages.
EventMachine	Fast, simple event-processing library for Ruby programs. The most popular library for concurrent computing in the <a href="#">Ruby</a> programming language.
FactoryBot	A software library for the <a href="#">Ruby</a> . Provides factory methods to create test fixtures for automated software testing.
Grape	<a href="#">REST</a> -like <a href="#">API</a> micro-framework for <a href="#">Ruby</a> . It's designed to run on Rack or complement existing web application frameworks such as Rails and Sinatra by providing a simple <a href="#">DSL</a> to easily develop RESTful APIs.
Jekyll	A simple, static site, blog-aware generator perfect for personal, project, or organization sites.
JRuby	Implementation of the <a href="#">Ruby</a> programming language atop the Java Virtual Machine, written largely in <a href="#">Java</a> . <a href="#">JRuby</a> has built-in support for <a href="#">Rails</a> , <a href="#">RSpec</a> , <a href="#">Rake</a> , and <a href="#">RubyGems</a> .
Minitest	Testing tool for <a href="#">Ruby</a> . Provides a complete suite of testing facilities for writing tests to verify expectations from a code base. Supports <a href="#">TDD</a> , <a href="#">BDD</a> , mocking, and benchmarking.
Padrino	<a href="#">Ruby</a> framework built upon the <a href="#">Sinatra</a> microframework. Created to make it easy to code more advanced web applications. It leverages convention and automation to accomplish larger building tasks.
Passenger	A fast and robust web server and application server for <a href="#">Ruby</a> , <a href="#">Python</a> , <a href="#">Node.js</a> and <a href="#">Meteor</a> apps. It makes deploying in production much easier and is scalable.
Phoenix	Advance <a href="#">MVC</a> web framework which implements the server-side MVC pattern. Many of its components and concepts are familiar to those who experienced <a href="#">Gon</a> web frameworks like <a href="#">Django</a> and <a href="#">Rails</a> .
Rake	Software task management and build automation tool. It allows the user to specify tasks and describe dependencies as well as to group tasks in a namespace. Tasks and dependencies are specified in standard <a href="#">Ruby</a> syntax.
RSpec	Testing tool for <a href="#">Ruby</a> , created for behavior-driven development ( <a href="#">BDD</a> ). Focused on writing software that emphasizes the importance of self-documenting, executable tests that drive the development process from requirements analysis through acceptance testing. Has a very rich and powerful <a href="#">DSL</a> (domain-specific language).
RuboCop	<a href="#">Ruby</a> static code analyzer and code formatter.
Ruby	A dynamic, object-oriented, general-purpose programming language with a focus on simplicity and productivity. It has an elegant syntax that is natural to read and easy to write.
