C# (.NET)

Avalonia UI	Avalonia is an open-source cross-platform XAML -based UI framework designed for building applications that run on Windows , Linux, and macOS . It is particularly useful for developers who want to build cross-platform desktop applications using C# and XAML .
Accord.NET Framework	NET machine learning framework combined with audio and image processing libraries completely written in C#. It is a complete framework for building production-grade computer vision, computer audition, signal processing and statistics applications.
ADO.NET	A set of classes that expose data access services to the .NET programmer. ADO.NET provides functionality to developers writing managed code similar to the functionality provided to native COM developers by ADO.
ASP.NET	Web framework for building modern web apps and services with .NET . ASP.NET creates websites based on HTML5, CSS , and JavaScript that are simple, fast, and can scale to millions of users.
ASP.NET AJAX	ASP.NET AJAX, formerly called Atlas, is a set of extensions to ASP.NET developed by Microsoft for implementing Ajax functionality. It is released under the Microsoft Public License (Ms-PL).
ASP.NET Core	Cross-platform, high-performance, open-source framework for building modern, cloud-based, Internet-connected applications. ASP.NET Core apps can run on .NET Core or on the full .NET Framework.
ASP.NET MVC	Web application framework which implements the model-view-controller (MVC) pattern. Helps build dynamic websites enabling a clean separation of concerns. ASP.NET MVC includes many features that enable fast, TDD -friendly development for creating sophisticated applications that use the latest web standards.
ASP.NET Web API	The ASP.NET Web API is an extensible framework for building HTTP based services that can be accessed in different applications on different platforms such as web, windows , mobile etc.
ASP.NET Web Forms	ASP.NET Web Forms is a web application framework and one of several programming models supported by the Microsoft ASP.NET technology. Web Forms applications can be written in any programming language which supports the Common Language Runtime , such as C# or Visual Basic .
Autofac	An inversion of control (IoC) container for Microsoft .NET . It manages the dependencies between classes so that applications stay easy to change as they grow in size and complexity. This is achieved by treating regular .NET classes as components.
AutoMapper	A library created for transforming object-object mapping works and resolving a problem of getting rid of one mapped object to another.
Blazor	Blazor is a modern web framework . It empowers developers to construct dynamic web applications using C# and .NET , offering a robust alternative to conventional web development frameworks that heavily rely on JavaScript . Blazor facilitates full-stack web development within the .NET ecosystem.
C#	Multi-paradigm programming language encompassing strong typing, imperative, declarative, functional, generic, object-oriented, and component-oriented programming disciplines.
C# frameworks	.NET 1.0 - .NET 4.5.*
C# testing tools	nUnit , SpecFlow , MStest .
Chart FX	Commercial package to create visually-rich, lightweight and secure charts that enhance enterprise application's display layer. Offers IDE integration and innovative features that set new standards in charting component technology.
CLR	The virtual machine component of Microsoft's .NET framework and the backbone of the .NET framework. CLR takes care of a number of low-level executions such as application hosting, thread handling, memory management, security checks and application performance.
Entity Framework	Object/Relational Mapping framework. It is an enhancement to ADO.NET that gives developers an automated mechanism for accessing & storing the data in the database. It was a part of .NET Framework, but since Entity framework version 6 it is separated from .NET framework.
F#	Succinct, expressive, and efficient functional and object-oriented language for Microsoft .NET that helps write simple code to solve complex problems. Used as a cross-platform Common Language Infrastructure (CLI) language, but it can also generate JavaScript and graphics processing unit code.
IdentityServer	IdentityServer is a free, open source OpenID Connect and OAuth 2.0 framework for ASP.NET Core .

Got it!

programmer output log statements to a variety of output targets.

ML.NET

ML.NET is a [machine learning](#) framework designed for the [.NET](#) developer platform. It's free, [open-source](#), and compatible with various operating systems. With ML.NET, developers can create, train, and deploy personalized machine learning models using either [C#](#) or [F#](#).

Mono

Implementation of Microsoft's [.NET](#) Framework based on the ECMA standards for C# and the [Common Language Runtime](#). The stated purpose of Mono is not only to be able to run Microsoft .NET applications cross-platform, but also to bring better development tools to [Linux](#) developers.
